Tip Photoshop Elements is a great alternative to Photoshop, and can be used to edit vector images. Photoshop requires hardware from Adobe Systems, Inc. The Photoshop CS3 package is priced at \$699 (US) for Windows. Some software covers similar ground to Photoshop, but will not perform the same types of tasks. For example, Photoshop is the industry standard, but other programs include layers to produce identical results:

- The **GIMP** (www.gimp.org) is another graphics editor. It is free and open-source software licensed under the GNU GPL.
- **Freehand** (www.freehanduk.com) is a vector graphics program licensed under the GNU GPL.
- The **CorelDRAW** (www.coreldraw.com) is a vector graphics software program. It is priced at US\$49 (US) per year. It is available for Windows. Both Photoshop and the above-mentioned free and open-source image editors have learning curves that make it difficult to go from no experience to becoming an expert. These are the two most commonly used editors and they have some key differences (both are covered in greater detail later in this chapter):

- **Creative suite:** A Photoshop is designed to be a single program that handles a wide range of tasks, such as editing, document making, and other design applications. A number of other programs may exist in a suite of programs, such as GIMP, Freehand, and CorelDRAW.
- **Creative effects:** Photoshop's tools enable the user to add background changes to the image. Other programs such as GIMP can add special effects, such as blurs, and even layer effects.

Adobe Photoshop 2021 (Version 22.3) For Windows [Updated] 2022

Thursday, June 27, 2009 After finishing up the division finals yesterday, I was able to work for awhile on my fourth bird portrait. This little bird I painted with a soft pastel - I had a little difficulty getting the color to flow without it looking flat and too much like a mural. Once I figured out how to manipulate it so it wasn't flat, it came out quite nice. The face is pretty flat in that it is a totally 3D surface, but it has a nice texture, and the hair is pretty good too. I have a couple projects I am working on that I want to post over the next couple of weeks.

Sunday, June 2, 2009 This is one of the first of my creations I have completed with the new color palette. I had started this with the older color palette, but changed it up and did more with the new colors. It is the face of an old man, or at least I think it is. I was going for a more shadowy look to the skin and I think that I will probably paint the overlying hair differently next time around. I have three more of these paintings in various stages of completion. I will post some of them here in the next week. Also posted today is an illustration I made for the Comic Con. When my two friends found out that I was going to be painting some of the show characters, they got together and came up with this amazing panel for the Con. I would love to share it with all of you. The image is a little generic, but I took it out of the original design to keep the sense of the page, so here is the image on a larger scale:

Saturday, June 1, 2009 OK, here is one of the paintings that is done from the painting class that was taught by Stacey. This is of a branch from an old tree with leaves that have turned brown. I liked the variety of colors in the brush strokes and the tonal variations. This is a much more complex painting than anything I have ever attempted before. It has a great sense of atmosphere, and I could sense that she was really pleased with how it came out.

Q: Weak references and GC In a C# winforms application, I'm updating an object that has a background worker thread that lives within its class scope. I update an object using a weak reference to this object. When this object is garbage collected
