Kasayama City is the main setting for the story of Grand Theft Auto: Chinatown Wars, which centers on an ancient Chinese military empire, its political maneuvering, and the intrigue of an old-world gang war. It is also the setting for the mission "Dyno Mason". There is a reason why this is the name of the city in the game; when asking Rockstar North developer Dan Houser, he noted that the city was an homage to their favorite city in Japan, the city of Kasayama. By this time the climate is similar to modern day Japan, and this is why the weather is set in spring or fall. Kasayama City is the largest city in Grand Theft Auto: Chinatown Wars, and in the game, Kasayama has many features that make it easy to locate and navigate. The character model for the player, called the "helicopter", is seen flying through the city's streets. The helicopter also moves through the city freely by its own momentum as well as by the "Smart Pedestrian" mode. The city has also been promoted in the video game Guitar Hero. The question is quite simple, but I haven't found a way to do it efficiently. Suppose you are given a set  $S = \{1, 2, 3, 4, 5\}$  and you want to generate all subsets of length  $k$ . Generating all subsets of length  $k$  is easy: 1:  $\{1,2,3,4,5\}$  2:  $\{1,2,3,4\}$  3:  $\{1,2,3\}$  ... But what is the most efficient way to do that? A: Well, we have to take into account that while subsets of size  $k$  are simple to generate, size  $k$  itself isn't that easy. For instance, there are  $2^k$  sets of size  $k$ , and there are only  $2^k/k!$  of them. What's more, there are approximately  $82157476af$
